**SCI Unit 1  
Rome**

**Mem No. 693**

**3 March 1945**

**To: Lt. Col. P. G. S. More, Signal Section, OSS.**

**Subject: Plan IV.**

1. Our contact in the north is preparing six (6) W/T sets. The power will be approximately 40 watts; crystals will be prepared for four wavelengths around 35 meters for day transmission and two wavelengths around 35 meters for night transmission.

2. As previously stated to you, this operation will be as secure as the usual SI or SO operation.

3. At present in Rome, is our W/T technician BREAKER, who was tested at your school in Bari. We would appreciate additional training here in Rome for BREAKER to enable him to instruct and supervise our network in the north.

4. The code books will be sent by courier to Milan from Switzerland.

5. During my absence, Mr. Rocca will take charge and will inform BREAKER when it is possible for him to resume his training. We would like to have him ready for this operation in approximately two weeks time.
